

### GPS TRACKING AND FLEET MANAGEMENT AT THEIR BEST

TRAXLOGIX offers you industry-leading, real-time GPS/GSM tracking devices. A GPS tracking system tells you where your vehicle is, where it has been, and what it is doing. Our tracking reports include valuable information such as speeds and headings. Our GPS/GSM tracking system can locate a vehicle, boat, or motorbike from any computer or machine with Internet access, from anywhere on the globe, at any time.

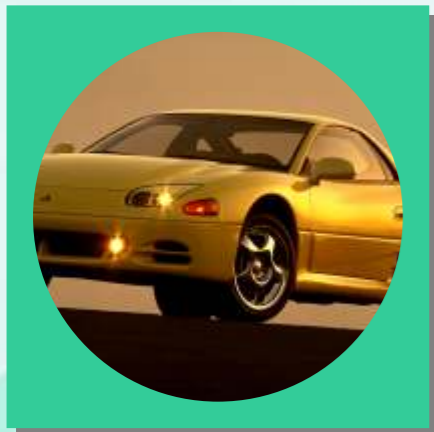

TRX-110  
STAND-ALONE  
TRACKING UNIT

"authorized zone," a very useful function allowing the quick recovery of customers and vehicles. For car-rental companies, we offer an affordable way to reduce costs. Because no wires need to be connected, and because the product can easily be removed from one car and reinstalled in another, business is bound to improve.

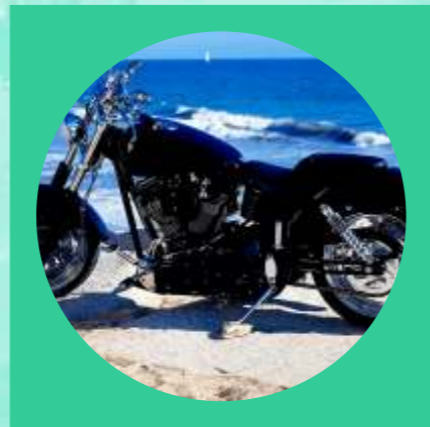

Other applications of the TRX-110 tracking base unit include theft protection and tracking of boats, personal watercraft, motorcycles, and construction equipment. The product enclosure is water-resistant, allowing it to be used in the harshest environments.

The TRAXLOGIX TRX-110 tracking base unit offers the ultimate in high-performance theft and carjacking protection. Installation takes five minutes and requires no tools. Simply unpack the product, attach the battery pack, affix the base unit inside the vehicle, and register the product by calling the control room. Because the product does not interact with the manufacturer's electrical system, it will not void the manufacturer's warranty. The long-lasting,

maintenance-free, nonrechargeable lithium battery pack will provide up to four years of service without the need of external power. When the battery needs to be replaced, the owner will receive a message from the control room. The TRX-110 connects to the GSM network every day. If the vehicle has been stolen, the owner calls the control room. As soon as the base unit wakes up, real-time tracking can start, and the vehicle can be located. The TRX-110 enclosure is water-resistant. The product also feature the possibility to determine an

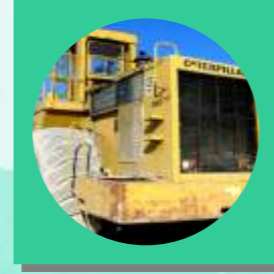

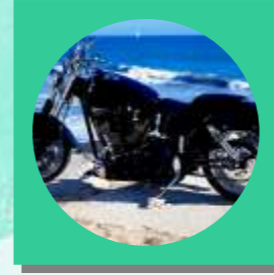

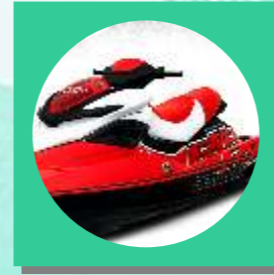

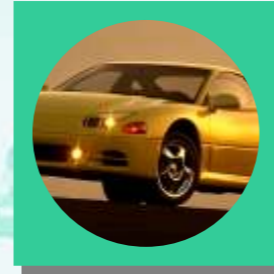

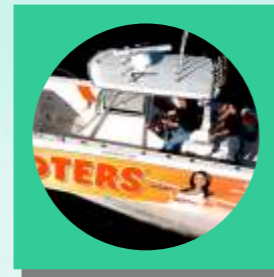

Real-time tracking of parcels and assets is now a reality. The high level of integration makes the Traxlogix TR-200 base unit a completely stand-alone system. The product can be programmed to record the entire itinerary of the parcel and automatically upload its memory content to the communication server. Real-time tracking can easily be achieved by simply requesting the product to send GPS positions at regular intervals. For temperature-sensitive goods, alerts can be sent by the product if the temperature of the parcel is above or below the preprogrammed upper and lower limits. A wide choice of rechargeable and nonrechargeable battery packs is available. For example, armored cash-transportation monitoring can be achieved using a rechargeable solution. The battery can be charged overnight, and the products can be inserted into the money bags in the morning.
